

Data Validation Framework FACTSHEET

The Kaya Solutions **Data Validation Framework** is an add-on for Microsoft Dynamics AX. It enables you to add rules applicable to your organization without the need to add customizations.

The Data Validation Framework saves you time and money. Creating customizations may take some weeks or even longer due to development, testing and deployment procedures. Setting up a rule in Data Validation Framework only takes **some minutes**. So you are not dependent on the timeframe and costs which come with customizations.

Data Validation Framework prevent users from inserting or updating records which do not comply with your business requirements. The rules can be setup to, for example, check on **mandatory** fields, or **control** contents by setting criteria. It is also possible to check for blank values or fill fields with default values. Thanks to a **flexible** setup, you can assign which organizations a rule is applicable for. You can also determine under which conditions a rule will be valid. Some examples of rules you can use with the Data Validation Framework, which save from performing customizations:

- Making the Credit rating field on the customers mandatory for external customers.
 - Selection of Payment terms for customers linked to certain customer groups should be limited to only 14 or 30 days net.
 - Limit the Discount on sales order lines to a maximum of say for example 20% or based on an item group.
- The rules can be applied on both **standard** or **custom** tables and fields.

Please contact us if you would like to know more about this product.

FACTS

- Setup own validation rules
- No customizations needed; higher ROI
- Ease of use, Powerful, Agile
- Available for all versions of AX2012 and AX2009
- No code merge of rules needed during upgrades
- Faster realization; lower TCO
